

IMPORTANT REQUEST FROM YOUR WATER SUPPLIER

Dear Water Customer,

The Environmental Protection Agency (EPA) recently announced changes to drinking water regulations that require water suppliers to identify all materials used in the construction of the water system. The goal of these changes is to identify and remove all lead pipes in the drinking water system. All public water suppliers must identify all construction materials used on both the supplier's AND the customer's side of the water meter. Your help is needed to complete this requirement.

The Kansas Department of Health and Environment (KDHE) is requiring all public water systems to submit this information before October 16, 2024. If the required information cannot be gathered from the homeowner, KDHE may require the water supplier to excavate private lines in order to identify them. That would be very time consuming and expensive.

Your help is needed to complete this requirement. Please complete the attached survey as soon as possible.

Thank you for your participation!
